[PROPOSED CLIENT-BASED WEB APPLICATION TITLE]

[Student Name 1], [Student Name 2], [Student Name 3], [Student Name 4], [Student Name 5]
[Course / Section]
[College or University], [City, Philippines]
Instructor/Adviser: [Name]
Date Submitted: [Month Day, Year]

***Abstract*—**[Write one paragraph of about 150-200 words. Identify the SME client and its specific need, describe the proposed online web application, target users, PHP/JavaScript/XML roles, development method, hosting plan, and measurable expected result. Use future tense because this is a proposal. Do not include citations here.]

***Keywords*—**PHP, JavaScript, XML, SME, client-based web application, online deployment (use 3-5 keywords).

I. CLIENT AND PROJECT CONTEXT

A. SME Client Profile

[Identify a legitimate small or medium enterprise (SME). State its business name, industry, location, authorized representative, current process, and intended users. Obtain the client's permission before collecting or presenting business information.]

B. Business Need and Rationale

[Explain the client's specific operational problem or opportunity and why one focused online web application is an appropriate solution. Support important claims with numbered citations such as [1].]

C. Problem Statement

[State the main client problem clearly. Describe the manual, delayed, repetitive, inaccurate, or inaccessible process that the proposed application will address.]

D. Scope and Limitations

[State the intended users, included and excluded functions, supported browsers/devices, data limits, project duration, client responsibilities, hosting limits, and maintenance boundaries.]

II. PROJECT OBJECTIVES

The general objective is to [design, develop, deploy, and evaluate one client-based online web application for the selected SME]. Specifically, the project aims to:

1. [gather and document the SME client's approved functional and nonfunctional requirements];
2. [design the application's workflow, user interface, data structure, and access roles];
3. [implement the application using PHP, JavaScript, and XML and deploy it to an online host]; and
4. [evaluate functionality, usability, compatibility, online availability, and client acceptance].

III. PROPOSED WEB APPLICATION

A. Application Overview

Application title: [Title]
SME client: [Business name]
Application type: [e.g., inventory, booking, ordering, or records]
Target users: [Authorized users]
Access: Online through [domain/subdomain or hosted URL]

B. Functional Requirements

[List the essential features requested and approved by the client. For each feature, identify the user, input, processing or business rule, stored or exchanged data, and expected output. Keep the application focused on one approved SME need.]

C. Users, Access, and Interface

[Describe user roles, authentication if required, navigation, forms, reports, mobile responsiveness, accessibility, validation messages, and privacy controls. Do not include real passwords or sensitive client data.]

D. Application Workflow

[Insert Fig. 1, a simple workflow showing the user, input, PHP processing, XML data exchange/storage, JavaScript interaction, and displayed result.]

[Insert Fig. 1 here]

Fig. 1. Proposed web application workflow.

IV. CLIENT AND INSTRUCTOR APPROVAL

Students shall begin full development only after the SME client confirms the problem and requirements and the instructor/adviser approves the title and proposal. The application must be deployed online before final acceptance.

Decision	[ ] Approved [ ] Approved with revisions [ ] Resubmit
SME Client	[Representative's name, signature, and date]
Instructor/Adviser	[Printed name, signature, and date]
Online URL	[To be completed after deployment]
